Abstract of **DE4414013**

The kettle drum comprises a carrier (14) with a retainer (19) for the drumsticks. The carrier has at least one clamp (15) for securing to the skin ring (6) and/or the tensioning ring (7). Pref. the clamp has a first jaw (16) abutting one of the rings, and a second jaw (18) opposite the first one. The first jaw may abut the tensioning ring top side, while the second jaw may abut the underside of the skin ring. The second jaw is typically fitted to or formed on a clamping screw (17). The first jaw may be a shank of an angle, or a bracket (16).
